AFTAB DHALAIT

Full Stack Developer | React.js · NestJS · Node.js · PostgreSQL · Production DevOps

Pune, India | +91 93703 12566 | aftab.iot@gmail.com | linkedin.com/in/aftab-dhalait | github.com/aftabdhalait | Portfolio

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience building and deploying enterprise SaaS web apps. Currently building 35+ live HRMS modules (React.js, NestJS, PostgreSQL) at a funded SaaS startup and deploying the platform to production on an Ubuntu server (Nginx, PM2, SSL). Good with REST API design, microservices, multi-tenant apps, secure login (JWT / OAuth 2.0 / role-based access), and real-time dashboards. Also keen to work on IoT technologies and development, backed by hands-on AWS IoT Core, MQTT, and embedded experience. Comfortable owning work end-to-end — from Figma design to a secure, fast production system.

TECHNICAL SKILLS

Languages & Core: JavaScript, TypeScript, Python, HTML5, CSS3, Embedded C/C++

Frontend: React.js, Next.js, Redux, Redux Toolkit, Tailwind CSS, Responsive & Cross-browser UI

Backend & API: Node.js, NestJS, Express.js, REST APIs, GraphQL, JWT, OAuth 2.0, WebSocket, Microservices

Databases: PostgreSQL, DynamoDB, TypeORM, Prisma

Cloud & DevOps: AWS Lambda, API Gateway, Docker, CI/CD, GitHub Actions, Git, Vercel, Nginx, PM2, ThingSpeak, InfluxDB Cloud, HiveMQ Cloud, Ubuntu / Linux VPS, Let's Encrypt SSL, Render

Testing & Tools: Jest (Unit Testing), Postman, Linux, VS Code

Methodologies: SDLC, REST API Design

WORK EXPERIENCE

Software Developer Sep 2024 – Present · Pune, Remote

OrgLineAI (Funded SaaS Startup — HRMS)

- Built and shipped 35+ HRMS modules using React.js, NestJS/Node.js, and PostgreSQL, covering payroll, attendance, leave, and analytics for a live multi-tenant customer base.
- Deployed the multi-tenant SaaS app to a self-managed Ubuntu 24.04 server, configuring Nginx as a reverse proxy, PM2 for process management, and Let's Encrypt for SSL/HTTPS on both the app and the API.
- Hardened the server with a UFW firewall, fail2ban, and a dedicated non-root deploy user, and set up automated PostgreSQL backups before every deploy so PM2 could restart the app cleanly after crashes or reboots.
- Implemented multi-tenant data isolation with an organization I'd on every record, Prisma middleware, and JWT-based checks, enforcing role-based access on every API endpoint.
- Rebuilt slow endpoints for large record sets using server-side pagination and targeted PostgreSQL indexes, and replaced manual HR reporting workflows with live, filterable dashboards.
- Ran a Git-based deployment workflow with Prisma migrations, and turned Figma designs into responsive, production-ready UI.

Software Developer Jan 2024 – Aug 2024 · Pune, India

SAS Automation Pvt Ltd

- Delivered three products end-to-end during the engagement: an e-commerce platform, the WaNotifier IoT alert system, and SAS Simulator, a browser-based simulation game.
- Built reusable React.js components — multi-step forms, validation, data tables — for the e-commerce platform's storefront and admin panel, and integrated REST APIs for product listings, order management, and secure PDF invoice generation with error-handling middleware so failures surfaced clearly instead of failing silently.
- Built the WaNotifier alert pipeline connecting device telemetry over MQTT through AWS IoT Core and API Gateway/Lambda to WhatsApp notifications.
- Developed SAS Simulator, a browser-based simulation game, handling core game logic, state management, and an interactive real-time UI. Debugged UI and API integration issues across desktop and mobile browsers, working from QA and support reports to trace and fix recurring bugs at the root cause.

Web Developer Intern Aug 2023 – Nov 2023 · Bangalore, Remote

Zidio Development

- Built a full-stack MERN application (React.js, Node.js, Express.js, MongoDB) with real-time WebSocket notifications supporting multiple concurrent user roles.
- Worked across the full stack in a remote Agile team — from database schema design to deployed UI — and built reusable components to keep the interface consistent across modules

PROJECTS

PulseGrid — Real-Time IoT Monitoring Dashboard (Live) Aug 2026

Live: https://pulsegrid-xi.vercel.app/

Stack: *React.js, TypeScript, FastAPI (Python), MQTT (HiveMQ Cloud), InfluxDB Cloud, WebSocket, Apache ECharts, Vercel, Render*

- Built and deployed a full-stack real-time IoT monitoring platform: simulated sensor devices → MQTT (HiveMQ Cloud, TLS/MQTT5) → FastAPI backend → WebSocket → live React dashboard, with InfluxDB Cloud storing time-series history across lighting, water, carbon intensity, energy, and footfall metrics.
- Deployed a split-stack production architecture — React/Vite frontend on Vercel, FastAPI backend on Render — with an in-process background simulator task, environment-based config, and scoped MQTT credentials/ACL permissions.
- Diagnosed and fixed several live production issues end-to-end — MQTT protocol/session handling, broker credential permissions, and a topic-namespace mismatch between publisher and subscriber — to reach a stable, always-on data pipeline.
- Built an interactive Analyse view with live side-by-side metric comparison and a Control panel for sending real-time device commands back over MQTT.

Human Resource Management System (HRMS) Sep 2024 – Present

Stack: *NestJS, Node.js, TypeScript, React.js, PostgreSQL, Prisma, JWT, Nginx, PM2, Ubuntu VPS*

- Multi-tenant HRMS with 35+ modules (payroll, attendance, leave, analytics) serving 500+ users — clean, well-organized service/controller code.
- Built secure APIs with JWT and role-based access plus full Swagger docs, and shipped filter-based dashboards that replaced manual HR reporting.
- Deployed and maintained the live site (orglineai.com) on a self-managed Ubuntu server with HTTPS, firewall, process monitoring, and automatic database backups.

E-Commerce Platform Jan 2024

Stack: *React.js, Node.js, Express.js, Redux, Tailwind CSS, MySQL, JWT*

- Full-stack store with 50+ products, cart, checkout, payment, and live order-tracking; tuned MySQL queries with indexes and server-side pagination for faster page loads.
- Added secure JWT login with protected routes, a Redux global cart, a role-based admin panel with inventory management, and PDF invoices.

WaNotifier — Real-Time IoT Alert System May 2024

Stack: *AWS IoT Core, MQTT, AWS API Gateway, Lambda, Python, Node.js*

- Built a full IoT flow: device → MQTT → AWS IoT Core → API Gateway → WhatsApp alert — under 2 seconds from event to notification.
- Built an event-driven serverless setup on AWS with auto-scaling; secured devices using AWS IoT Core X.509 certificates and policy-based access.

EDUCATION

B.E. Electronics & Telecommunication Engineering (Hons. Data Science) Aug 2018 – Jun 2022 · Pune

Savitribai Phule Pune University — GPA: 8.56 / 10 (First Class with Distinction)

Post-Graduate Diploma — Internet of Things (PG-DIoT) Sep 2022 – May 2023 · Bangalore

C-DAC, Bangalore — AWS IoT Core, MQTT, Embedded C/C++, Raspberry Pi, STM32, Network Security

CERTIFICATIONS

- Juniper Networks Certified — Networking Fundamentals (Mar 2023)
- AWS Certified Cloud Practitioner (CLF-C02) — In Progress
